

## INSTALLATION GUIDE

This document covers the process of installing the ClyphX Pro Bindings accessory. Please **take your time** when completing these steps.

---

### Installation

To install the ClyphX Pro Bindings accessory, first close Live and then run the provided Setup executable (Windows) or package (OS X). At the end of the installation, you'll be presented with a dialog box indicating the Live installation(s) that the accessory was installed into. If you do not see the Live installation you're using listed there, you can select it manually.

In most cases, you will only need to install the accessory once. It will remain installed even after updating to a newer version of Live (when using Live's autoupdate feature). However, if you re-install Live or install Live to a new location, you will need to install the accessory again. It's recommended that you keep the Setup files on hand for such cases.

Once installation is complete, launch Live and then refer to the ClyphX Pro Bindings section of the ClyphX Pro User Manual for information on how to set up and use this accessory.

**NOTE FOR OS X USERS:** *If you receive a message stating "Setup can't be opened because it is from an unidentified developer", Control-click or right click on the Setup package and select **Open** from the menu that appears.*

*If you receive a message stating "Not authorized to send Apple events to Finder", open Terminal, enter `tccutil reset AppleEvents`; `tccutil reset SystemPolicyAllFiles` and re-run the Setup package.*
